

## Powdered Goal as a Fuel (Classic Reprint)

Excerpt from Powdered Goal as a Fuel  
In the two years that have elapsed since this book made its appearance, powdered coal has taken its place as the most promising fuel, bar none, in the industrial heating operations of the day. Town Councils in England have spent time and money in investigating the possibilities of this fuel and are equipping their Municipal Lighting and Power Plants with powdered coal systems. France has installed several large plants for use in her metallurgical works and under boilers with excellent results. Italy has sent several engineering committees to this country to investigate the successes ascribed to powdered coal. Japan has investigated and is convinced that in order to save her relatively small supply of coal, it must be burned in pulverized form. Japan has given several large orders for equipment during the past year. The writer, having spent the past three years in investigating the economies effected and the wide and various uses to which this fuel can be applied and in erecting and operating plants under all conditions, now desires to bring before an interested engineering public the results that have been achieved with this really marvelous fuel. In preparing this, the second edition, the author wishes to extend thanks to the following firms and gentlemen for their able assistance in this work: Fuller Engineering Company, Mr. H. G. Barnhurst; The Bonnot Company, Mr. A. A. Holbeck; Pulverized Fuel Equipment Corporation, Mr. H. D. Savage; Mr. R. E. H. Pomeroy; Mr. A. G. McGregor and Mr. John Dahlstrom. About the Publisher
