

Contraction and Convergence: The Global Solution to Climate Change (Schumacher Briefings)

This Briefing explains the origins of the climate crisis and describes some of the dangerous trends created by global warming. It describes the global policy framework of Contraction & Convergence (C&C) and how this was created and introduced to the United Nations in the 1990s by the Global Commons Institute (GCI) to avert these trends. Based on the thesis of Equity & Survival, C&C seeks to ensure future prosperity and choice by applying the global rationale of precaution, equity and efficiency in that order. GCI has campaigned for C&C since that time and it has become the most widely cited and arguably the most widely supported framework proposal in the global debate on what to do about climate change. Winning approval and awards, it is now regarded by many as the only basis on which achieving the objective of the UN Climate Treaty is possible: - see www.gci.org.uk.
